U.S. Podiatry Registry Announced at APMA Region Two New York Clinical Conference

USWR and APMA Collaboration to Improve Healthcare Quality Reporting Announced in New York

The Woodlands, TX—January 2016: As a part of their collaborative initiatives for the improvement of Healthcare Quality Reporting in the United States, the Chronic Disease Registry (CDR) dba the U.S. Wound Registry (USWR) and the American Podiatric Medical Association (APMA) announced the launch of the first and only Specialty Registry for Podiatric Medicine, the U.S. Podiatry Registry, at the [APMA Region Two New York Clinical Conference](#) aka NY16 held on January 22-24, 2016.

At the request of the APMA's executive leadership, the USWR provided them with a Press Release issued earlier this month, January 4, 2016, entitled: "The Chronic Disease Registry (CDR) Family Has a New Addition: CDR Offers the First and Only Specialty Registry for Podiatric Medicine." The USWR and its representatives will be on location during the APMA's Annual Scientific Meeting, July 14 - 17, 2016 in Philadelphia.

In addition to providing Podiatrists across the country a way to meet requirements and start to actively engage in quality initiatives, the USWR collects notable amounts of valuable data that will undoubtedly advance the ability for the specialty to establish relevant meaningful quality measures that represent the actual care Podiatrists deliver. Their 'ease-of-use' reporting platform leverages data portability requirements of Certified EHRs, seamless dual reporting functionality, customized clinical suggestions and personal guidance to ensure clinical reporting success. The USWR has become a kind of "Registry Roadmap" for wound care, hyperbaric medicine and podiatrists alike; a family of registries dedicated to helping clinicians navigate the complexities associated with U.S. Healthcare Quality Reporting.

The U.S. Wound Registry is a non-profit organization that gives back to the provider community through its data, research, publication and dedication to improving patient outcomes. It is the largest complete patient registry of wound, Diabetic Foot Ulcers, Venous Leg Ulcers, and Pressure Ulcers patients in the world. The USWR represents a broad geographic distribution of patients with records from over 50,000 patients, involving more than 125,000 wounds and nearly 2,000,000 patient encounters.
